

# PRE-ULC POWDER

A powerful healer for chronic/severe ulcers

## What is it?

**Pre-Ulc** powder is a totally unique and very effective product. It contains a range of Ayurvedic herbs & minerals which work synergistically together to heal ulcers. It heals both gastric and hind gut ulcers and results will be noticed very quickly.

*A healthy functioning gut is essential for the health and well being of your horse and pony.*

Use for horses and ponies that show severe symptoms and for those that have tried all other treatments unsuccessfully. Currently there is nothing like it for equines on the market today. It will change the lives of many horses and ponies that suffer so much with ulcers.

**Pre-Ulc** powder is to be used in the short term to initiate the healing process. For long term use we recommend that you use **Ulc30Ex Plus** liquid.

It is suitable for use by all horses and ponies from racehorses, competition horses to happy hackers and those retired.

## Symptoms of Ulcers

Symptoms of ulcers can be subtle or severe. They can result in physical or emotional difficulties, which can make handling or riding your horse difficult or even dangerous. For a comprehensive list please refer to our **Equine Ulcer** factsheet.

## What does Pre-Ulc powder do for your horse?

**Pre-Ulc** powder is unique because it contains four different herbal and mineral blends which are specially selected for their soothing and digestive properties:

1. **Kamdudha ras** - used for gastro-intestinal problems including excess stomach acid produced from consumption of feeds/forage high in sugar and starch. It will neutralise acid and inhibits excess acid production. It stimulates the production of digestive enzymes and boosts the digestive system.
2. **Avipattikar churna** - treats ulcers by decreasing gastric acid production, increases mucosal resistance to acid attack and increases mucus secretion. It protects the lining of the stomach against attack from acid.
3. **Laghu sutshekhar ras** - balances the acid in the stomach and normalises the acid/base ratio in the gut. Increases appetite and provides relief from excess acid.
4. **Shankh bhasma** - neutralises excess acid

Your horse very quickly will become calmer and more comfortable. They will eat better, look healthier and brighter. They will be easier to handle e.g. grooming, tacking up. They will have more energy and attitude for ridden and training work. Moodiness will disappear and they will appear much happier.

Information about the herbs and minerals found in **Pre-Ulc** Powder are listed below:

Herb / mineral	Latin name	What the herbs / minerals do?
<b>Kamdudha ras</b>

## Other products

Once the **Pre-Ulc** powder has had the desired effects, please use the following:

- **Ulc30Ex Plus** liquid (see product sheet). **Ulc30Ex Plus** is very effective at continuing the healing process in horses with ulcers and maintaining good gut health.
- For horses with additional health issues e.g had a course of antibiotics, had colic, laminitis, illness or needs an immune boost, use **Remount** at the same time as **Ulc30Ex Plus**. **Remount** is a very successful liver boosting tonic that will increase health and vitality. See the **Remount** product sheet for more details.
- If your horse is anxious due to ulcers or other reasons, use our calmer **Silent 4** at the same time as **Ulc30Ex Plus** liquid. See the **Silent 4** product sheet for more details.

## Testimonials

Hi Ron,

I just wanted to give you an update regarding my horse Spirit who I spoke to you about last week. I have tried to call but can't seem to get through, I imagine that you are incredibly busy at this time of year! All of the horses on the yard are wild at the moment, think the grass is awful atm.

You sent me the new powder to try which I have been using for just over a week, I am now onto the second tub of the powder. I have been giving a generous tablespoon twice a day and then also giving the Ulc30Ex Plus 50ml at night. There seemed to be an initial improvement on the powder which included being less reactive and spooky (this has deteriorated again this week), but other issues such as not eating his hay, being tucked up, pawing at the ground when eating feeds, impatience, difficulty travelling have all remained relatively unchanged. He has actually lost weight.

Management wise he gets off the grass overnight and always has hay left over in the morning, he is on agrobs feeds which are very gut friendly and free from all nasties, he gets a chaff based meal prior to exercise and he has a relatively chilled life although he is in a decent amount of work. His saddle, teeth have been checked and he has the physio on 14/5/19 and I am expecting some tightness due to how sore his tummy has been. Although he is completely sound.

Do you have any recommendations?

Kind Regards

Lilli

15th May 2019

Hi Ron,

I just wanted to give you an update regarding Spirit. There has been a significant improvement in Spirit's symptoms over the past few days. He will have been on the powder for a total of 12 days today and there have not been any symptoms of girthiness, poor appetite or extreme spookiness. He is back to being chilled when ridden and does not resent girthing up. There has also been a massive improvement in his travelling, before he was kicking the box and literally throwing himself at the partitions, it was scary but the last 2 times that he has travelled he has been quiet as a mouse. I have ensured that he travels with a full tummy and have given him 25ml of the liquid in that pre-travel feed, which seems to help also. He is also out 24/7 now which is helping regarding stress levels and I have created a track system for him so that I can manage the grass and encourage him to eat as much hay as possible. He had a physio session yesterday and I was slightly apprehensive that he may not be able to tolerate it as he has been so twitchy and sensitive over the past few months but he stood good as gold and actually really enjoyed the treatment.

Kind Regards

Lilli
