

NEUTRA-20

For horses sensitive to excess acid

What is it?

Neutra-20 powder is an exciting new product, exclusive to Ron Fields Nutrition. It contains a range of Ayurvedic herbs & minerals which work synergistically together to prevent acid damaging the gut. Use for both gastric and hind intestinal issues. Results will be noticed very quickly.

A healthy functioning gut is essential for the health and well being of your horse and pony.

Use with horses and ponies that have already used the **Pre-Ulc** powder and are now using **Ulc30Ex** Powder to maintenance. Currently there is nothing like it for equines on the market today.

Neutra-20 powder should be used in combination with **Ulc30Ex powder** to prevent any issues from reoccurring.

It is suitable for use by all horses and ponies from racehorses, competition horses to happy hackers and those retired.

Symptoms

Symptoms can be subtle or severe. They can result in physical or emotional difficulties, which can make handling or riding your horse difficult or even dangerous. For a comprehensive list please refer to our **Equine Ulcer** factsheet.

What does Neutra-20 powder do for your horse?

Neutra-20 prevents acid splash from damaging the lining of the upper stomach and helps damaged areas to heal. It will help prevent issues from reoccurring. It also helps to heal hind gut damage from acidosis.

Your horse very quickly will become calmer and more comfortable. Moodiness will disappear and they will appear much happier.

Information about the herbs in **Neutra-20** Powder are listed below:

Herb / mineral	Latin name	What the herbs / minerals do?
Guduchi vine	<i>Tinospora cordifolia</i>	Anti-inflammatory, increases energy & appetite, anti-oxidant, anti-microbial, immune booster, fights infection
Bahera	<i>Terminalia bellirica</i>	Anti-bacterial, anti-fungal, anti-oxidant, relieves diarrhoea, anti-ulcer
Myrobalan	<i>Terminalia chebula</i>	Aids digestion, relieves diarrhoea, anti-microbial, gastro-protective, anti-bacterial, anti-fungal
Indian gooseberry	<i>Emblica officinalis</i>	Digestive aid, anti-inflammatory, gastro-protective, relieves diarrhoea, anti-oxidant

Other products

For the best use of this product your horse should have already had the **Pre-Ulc** powder (see factsheet) and are now using **Ulc30Ex** Powder for maintenance. **Neutra 20** works very well in combination with **UlcEx30** **Ulc30Ex powder** (see product sheet) is very effective at continuing the healing process in horses with ulcers and maintaining good gut health.

- For horses with additional health issues e.g had a course of antibiotics, had colic, laminitis, illness or needs an immune boost, use **Remount** at the same time as **Neutra-20**. **Remount** is a very successful liver boosting tonic that will increase health and vitality. See the **Remount** product sheet for more details.
- If your horse is anxious due to ulcers or other reasons, try our calmer **Silent 4**. See the **Silent 4** product sheet for more details.

How to feed

To make the transition from the **PreUlc** powder to **Ulc30Ex** powder smoothly and to give the **Ulc30Ex** powder every chance to work, it is recommended that you use the new product **Neutra-20** at 20g in the morning. **Ulc30Ex** will be fed in the evening. **Neutra-20** is particularly effective at combating gut issues caused by Spring grass or flushes/ stresses in the grass due to the weather conditions. You continue using the **Neutra-20** each day until you get down to the maintenance level of the **Ulc30Ex** and then if your horse is staying comfortable you can try stopping with the **Neutra-20**, but continue with the **Ulc30Ex**.

If you notice your horse showing symptoms again e.g with changes in the grass you can reintroduce the **Neutra-20** and also increase the dosage of the **Ulc30Ex** upto 50g and repeat the process. Some people prefer to stay on with the **Neutra-20** and **Ulc30Ex** plus at all times - just do whatever works best for your horse. This enables a flexible approach for your horse. Using these two products may result in a long term approach for your horse.

Target the use of **Neutra-20** when you notice a change in your horse e.g. discomfort associated with changes in the grass. This is instead of increasing the dosage of **Ulc30Ex** powder back up to 50mg and gradually reducing it back to maintenance. We wanted to have a more cost effective solution for our customers.

Testimonials

Hi Ron

Thank you so much for the Neutra-20, I have been using it for a good few days now, initially alongside the PreUlc and now Ulc30Ex and Leo's windsucking has stopped again! This is quite remarkable with the weather being so changeable with sunshine and showers (with heavier dollops of rain added for good measure). Once the weather settles a bit, I shall try reducing his dosage (I am currently giving him 20g am and pm).

I am so appreciative of all your help.

27/05/22

So I bought Ernie back in January 2022, he came down from a big showing yard in Yorkshire having previously been brought over from Ireland. Before I bought him I knew he was a bit stressy, especially in the stable, but I have had ID's before and they can be like that. He travelled down from Yorkshire, 7.5 hour trip, very quiet and well behaved on the box. As expected he was stressy in the stable, very bolshy and hard to handle, but really good to ride. Then I came off in the road, not his fault, completely mine as I was turning the wrong way chatting and he spooked and I slid off the side onto the concrete. It seemed that after that time everything started to get worse, his behaviour was even sharper, he was twitchy, silly and just generally not happy so I contacted Ron after recommendation from a friend and put him on the ULC30EX which helped him massively. I then had Tom Beech Vet Osteo come and see Ernie and he said that he needed a complete detox as a lot of his issues were coming from within, so again I contacted Ron and we put a plan together, Gut Restart, then Remount alongside the ULC30EX. We then started on the Neutra20 in the morning and ULC30EX in the evening, which I adjust the dosage when we have a flush of grass and I can honestly say he is like a different horse. He still has his silly moments but then he is only just 6, so I put him on Silent 4 just to take the edge off him when he excitable.

The Neutra20 alongside the ULC30EX as maintenance has been a game changer, he is so much more comfortable, now loves his stable, super chilled on the yard, before if a horse went in or out he would explode but now he happily ties up and stands when he is in on his own or if others move about.

Ron has been amazing and his help and advice has been priceless. I am very grateful.

I now have a happy horse who clearly has had a rough start, who has his very own human which he loves and fingers crossed we have a fun and exciting future together.x

Janine
